

Simple. Innovative. Limitless.
Give your designs the Quantify touch

As a designer or architect, the look and feel of your designs means everything.

With smart home technology rapidly becoming standard, you need an adaptable solution that effortlessly articulates your design vision.

You need something that's always on trend – something that will last your clients a lifetime, no matter the changes to their lifestyle or needs.

You need something brilliant, something that promises and delivers everything your clients desire. Quantify Technology have the perfect smart home solution for your next design project.

Simple

Quantify's simple, powerful and stylish smart home solution is everything you could ask for.

The physical building blocks, our fully-networked dimmer switches and power outlets, are the wall furniture – they enable the next level of interaction between people and architecture.

Deliver your clients a sophisticated design with high quality glass Touch Panels that are available in a choice of Modernist Icon or Pinstripe artwork. Available in black and white, they are designed to accentuate your architecture and décor.

It's so easy-to-use and convenient, homeowners will love you for it.

Innovative

The solution is a platform for life. Embedded into the fabric of any building is a scalable and secure system that evolves and adapts to peoples' changing needs.

Quantify's qDevices are economical and easy to install into new developments, or retrofit into existing buildings, using standard cabling and wall boxes.

The qDevices have been designed to offer customers a reliable product that is highly desirable and feels great to touch, while coming in at a marketable price point.

Control, monitor and manage connected accessories individually or as part of a scene. Expertly designed living experiences can be personalised and controlled using voice, touch or app – anytime, anywhere.

Limitless

This solution promises limitless scalability, from a single installation to an entire block of apartments.

Quantify provides custom applications for architects and planners to design and pre-configure qDevices to reflect electrical plans, saving weeks of work.

When new technologies become available, homeowners can replace Wi-Fi Feature Cards and Touch Panels without an electrician.

Architects and designers looking for an edge can now offer consumers the affordable digital home experience they are looking for.

Now, that's not just limitless, it's priceless.
